

Our System of Dress will guide you through layering for the weather and your ride and is based on three layering options:

-  Outer-Layer (Jacket)
- Mid-layer (Jersey)
- Inner-Layer (Baselayer)

HERE ARE THE BASICS

First, choose your inner-layer

There are several types of baselayers with the primary focus of transferring heat and moisture from your skin. Choose your baselayer based on your level of effort and weather conditions.

COOL + DRY = TRANSFER BASELAYER

COOL + HUMID = MERINO BASELAYER

COLD = MERINO THERMAL BASELAYER

Second, choose your outer-layer

This layer's focus is on the conditions outside. It's essential to evaluate if you need protection from cold, wind, precipitation, or even nada. If nada, your outermost layer can be a jersey.

-  COLD = THERMAL SOFTSHELL
-  WIND = BARRIER
-  RAIN = WxB
-  VARIABLE CONDITIONS = PRO AmFIB*
-  NOTHING IN PARTICULAR = THERMAL JERSEY

Last, choose your mid-layer

This layer's focus is incorporating some insulation to stay comfortable using our wide selection of jerseys.

-  COLD WITH PRECIPITATION = THERMAL JERSEY UNDER OUTER-LAYER
-  COOL WITHOUT PRECIPITATION = THERMAL JERSEY AS OUTER-LAYER
